CONFERENCE & EXPOSITION

OCEANS 2020 ENGINEERING DESIGN CHALLENGE

INFINITY Science Center is challenging the young minds of our K-8, 9-12 & Community College students to help with a real-world problem they are being faced with. The challenge involves engineering an alligator-proof device to sample water in their neighboring ponds that can be deployed from land, maneuver to a given location, take the sample, and return to land for retrieval.

Students will present their prototypes at the MTS/IEEE OCEANS 2020 reception, which will be held Monday, October 19, 2020 and the winning design will be implemented at INFINITY Science Center.
